BASIC UNDERSTANDING ON FREE AND OPEN-SOURCE SOFTWARE

a) Describe open-source software with example

Open source software is software with source code that anyone can inspect, modify, and enhance. "Source code" is the part of software that most computer users don't ever see; it's the code computer programmers can manipulate to change how a piece of software—a "program" or "application"—works. Programmers who have access to a computer program's source code can improve that program by adding features to it or fixing parts that don't always work correctly.

examples :

- Libre Office.
- GNU/Linux.
- VLC Media Player.
- Mozilla Firefox.
- GIMP.
- VNC.

Paragraph B I U Text color Background color Link Image Video Embed

Explain is free source software with examples.

The Free Software Directory maintains a large database of free-software packages. Some of the best-known examples include the **Linux kernel**, the BSD and Linux operating systems, the GNU Compiler Collection and C library, the MySQL relational database, the Apache web server, and the Send mail mail transport agent

Difference between open source and free source

1. Software is an important part of people's lives.	Software is just software. There are no ethics associated directly to it.
2. Software freedom translates to social freedom.	Ethics are to be associated to the people not to the software.
3. Freedom is a value that is more important than any economical advantage.	Freedom is not an absolute concept. Freedom should be allowed, not imposed.

social freedom.	the people not to the software.
3. Freedom is a value that is more important than any economical advantage.	Freedom is not an absolute concept. Freedom should be allowed, not imposed.
4. Examples: The Free Software Directory maintains a large database of free-software packages. Some of the best-known examples include the Linux kernel, the BSD and Linux operating systems, the GNU Compiler Collection and C library; the MySQL relational database; the Apache web server; and the Sendmail mail transport agent.	Examples: Prime examples of open-source products are the Apache HTTP Server, the e-commerce platform osCommerce, internet browsers Mozilla Firefox and Chromium (the project where the vast majority of development of the freeware Google Chrome is done) and the full office suite LibreOffice.
